

unusual book. The story follows the adventures of witty twin sisters on their journey into an imaginary world, but there is a twist: in each step they need to solve some words, logic or math puzzles that will open the door into the next adventures. Throughout this journey, the twins (and the readers) learn about math, science, classic poetry, history and literature. It is rare to find a book that is not only an educational tool to encourage youngsters to love math and science, but at the same time a book that is simply a joy to read for all ages (adults who feared math all their life are warned that, God forbids, they may rediscover the fun of it). This book is a modern version of Alice in Wonderland (it has been clearly inspired by the writing of Lewis Carroll), but it is also an activity book (it has puzzles for the reader to solve at the end of each chapter, with solutions at the end of the book). The book is written in a very rich language (admittedly, I had to use the dictionary a few times) full of humor, puns, and tongue twisters that will spin your head. Some parts are gems that are so funny and smartly written that they made me laugh out loud. My favorite part is the description of the interaction between the two girls - they continuously teasing and challenging each other throughout their journey and sure to inspire other girls to be interested in math and science. In summary, the book will provide enrichment for young readers covering a wide range of subjects. Educators and parents who want their children to be creative thinkers and problem solvers will get from this book tons of ideas for further projects to do with their kids and likely enjoy reading it themselves. This book can provide a summer-long activity for kids. 0 of 0 people found the following review helpful. Four Stars By nengA good read for young people who love mathematical puzzles 0 of 0 people found the following review helpful. I love it -- said Alexander By Anastasia Prentiss The story was fun, the puzzles were challenging but it ended too soon! It was a fun read for my eight year old-- though we didn't do all the puzzles!

Galileo, Newton, Descartes, and Pascal too, All followed rabbit trails that led to something new. Lulu and Elizabeth are two girls who love to play with numbers, words, and (on occasion) toy swords. Join them on a grand adventure, where classic math and logic riddles lead the way through a world inspired by Lewis Carroll's poetry. Filled with engaging puzzles, tidbits about famous mathematicians, and a dash of humor, this interactive book is sure to inspire adults and children, alike, to follow their own rabbit trails into the magical world of mathematics.
