Mrs Catherine McGrew Jaime : Math Facts Fun: Fun with numbers for all ages and abilities! before purchasing it in order to gauge whether or not it would be worth my time, and all praised Math Facts Fun: Fun with numbers for all ages and abilities!:

1 of 1 people found the following review helpful. Dice game differentiated By C. melvin I was surprised how little there is to this book. It is basically the same game repeated using different numbers of die. So for me it boils down to the same game differentiated to meet the needs of various learners. This could be a good resource for someone who doesn't know how to take a basic concept and tweak it to meet the needs of different children, because it is a very good example that concept. 0 of 0 people found the following review helpful. One book for many levels! By Doc Savage A great resource for students on many levels. I have used this book for elementary students as well as high school. I like the flexibility of this product. It really is a fun way to work on math basics. My reluctant students have responded well

to this game.

Yes, Math can be fun! I tell my students that all the time, but they often seem in doubt. We developed this game to help students practice their addition, subtraction, multiplication, and division skills in the form of a game. There are also several pages of "Math Extras" - including Skip Counting, a Hundreds Chart, Sieve of Eratosthenes," and Addition and Multiplication Tables. And now, in our second edition, we have added five international thinking games - from across the world and through the ages. The game pages are reproducible for use in a family or classroom situation.
