Vivien Lucas : Mathematical Team Games: Enjoyable Activities to Enhance the Curriculum before purchasing it in order to gage whether or not it would be worth my time, and all praised Mathematical Team Games: Enjoyable Activities to Enhance the Curriculum:

Team Games are special mathematical puzzles and problems which produce real cooperation between the members of a team. The mathematical content is that of the normal curriculum and whether you call them games, puzzles or

problems they undoubtedly offer a very positive experience at a variety of different levels. Each player only gets some of the information and so all must play a part in arriving at a solution. Sixteen tried and tested team games are provided in photocopiable form and once it is realised how well this format works, it will not be difficult to construct more for yourself.
